

SECMA COVER PLUS

Sterile transducer covers

Our sterile transducer covers with adhesive offer a superior solution for medical professionals by eliminating the need for gel under the cover. This results in:

- **No bubbles or wrinkles** – ensuring a consistently clear ultrasound image.
- **Telescopic folding** – allowing a completely sterile application process.

Enhanced Sterility & Patient Safety

- Each cover is single-use and packed in a sterile pouch, now also suitable for intrasurgical use.
- 100% sterility and airtightness are crucial to preventing contamination, protecting both the patient and the ultrasound transducer.

Avoid Unsafe Alternatives

- Tegaderm and similar materials are not airtight, increasing the risk of cross-contamination.
- Certain adhesives found in non-medical products can damage the transducer lens, leading to expensive repairs or replacements.

Available for Curved & Abdominal Transducers

Specially designed to perfectly fit curved transducer lenses, ensuring optimal image quality at all times.

Item no.	Product	Size	Pcs
18030	Secma Cover Plus - Small	18x30 cm	50
18120	Secma Cover Plus - Medium	18x120 cm	50
